

Class Assignment: MPG tables and charts

MA615

September 9, 2019

Class assignment:

Using the MPG dataset, which is available with the ggplot2 library, produce a document that includes the following elements: headers, text, tables, and plots.

Tables should include a comparison of city and highway mileage by the class of car and the best three car models for city and highway mileage for all the years in which data is available.

Plot the data displaying as much of the data as you can. Put continuous variables on the axes and include a locally smoothed regression line to show the relationship with mileage. Also make a box plot comparing city and highway MPG by class of car.

Tables

This example is flawed even though the code works. Explain. And now that you know how to produce the table can you improve the code by using an **apply** functional?

```
data(mpg)      ## load the data

mpg$cyl <- as.factor(mpg$cyl)  ## convert discrete variables to factors so that they plot
mpg$drv <- as.factor(mpg$drv)  ## as different colors, not gradations of one color

mpg$cty <- as.double(mpg$cty)

## dplyr code trunk
##---
mpg_1 <- select(mpg, cty, hwy, class) %>% group_by(class) %>% summarise(City=mean(cty),Highway = mean(hwy))
kable(mpg_1,format = "latex", booktabs=TRUE, digits = 2,      ## call kable to make the table
      col.names = c("Class", "City", "Highway"),
      caption = "Mean City and Highway MPG by Car Class")

##---
##
```

The next table is a bit tricky.

Table 1: Mean City and Highway MPG by Car Class

Class	City	Highway
2seater	15.40	24.80
compact	20.13	28.30
midsize	18.76	27.29
minivan	15.82	22.36
pickup	13.00	16.88
subcompact	20.37	28.14
suv	13.50	18.13

```

## You probably want to get started with a little investigation.
## Using unique(mpg$year), you find out that there are only two years - 1999, 2008.

mod_99 <- unique(mpg$model[mpg$year=='1999']) ## vector of models in 1999
mod_08 <- unique(mpg$model[mpg$year=='2008']) ## vector of models in 2008

mod_99_cty_mean <- rep(0, length(mod_99)) ## setup vector for 1999 cty mileage means
mod_08_cty_mean <- rep(0, length(mod_08)) ## setup vector for 2008 cty mileage means
mod_99_hwy_mean <- rep(0, length(mod_99)) ## setup vector for 1999 hwy mileage means
mod_08_hwy_mean <- rep(0, length(mod_08)) ## setup vector for 2008 hwy mileage means

for(i in 1:length(mod_99)){

  mod_99_cty_mean[i] =
    mean(mpg$cty[mpg$year=='1999' & mpg$model == mod_99[i]])

  mod_08_cty_mean[i] =
    mean(mpg$cty[mpg$year=='2008' & mpg$model == mod_08[i]])

  ###
  mod_99_hwy_mean[i] =
    mean(mpg$hwy[mpg$year=='1999' & mpg$model == mod_99[i]])

  mod_08_hwy_mean[i] =
    mean(mpg$hwy[mpg$year=='2008' & mpg$model == mod_08[i]])

}
